*The Program Implementation category contains the basin team and capital strike team cost centers with high levels of loan out labor to accomplish capital projects. Budgeting loan out labor reduces the budget within the cost center. This happens because the capital fund reimburses the Overhead/Central Costs cost center associated with the loan out labor. At significant levels of loan out labor the reduction in budget is so great that it reduces the budget below zero.

** A portion of these overhead costs are reimbursed from the capital fund for staff time loaned out to capital projects.

The City of Kent constructed a secondary containment levee in this reach, set back from the river's edge, which is currently not part of the federal levee. The only remaining structure between the two levees is a Puget Sound Energy facility. The Horseshoe Bend Levee Certification Report calculated Factor of Safety (FOS) values for rapid drawdown of 1.08 and 1.55 at about RM 24.3 and RM 24.4, respectively. River bed scour in this reach between 1986 and 2011 is 2.7 feet at RM 24.24.
